

Age 6-12

Sustainable Shaun Game

- Play an amazing online game, challenging your child's sustainable city building skills! Help Shaun build a new eco-friendly place to live for the stray animals of the Big City, making sure to keep them all happy by building new creations.
- The interactive game is designed to introduce children to sustainability in a fun and challenging way, exploring what people need, as well as balancing the impact on the environment. There are plenty of learning opportunities within the game such as gridlines so that children can map their virtual world in the real world.

What you need:

- Computer with internet connection

What to do:

- Go to the website <https://www.sustainablelearning.com/resource/sustainable-shaun>.
- Have a go with your child at building your very own sustainable city and provide your citizens with all that they need; recycling and reusing different resources, growing food, producing energy, providing transport and improving nature.
- A tutorial video is available for children to watch that talks them through how to play the game.
